Thanks for choosing to register Eudora!

You'll next be walked through a few quick steps, as described below, before registration is complete:

- Eudora will open your web browser and take you to our registration page
- You'll fill in some simple registration information on the web site.
- We'll then email a Eudora registration code back to you
- The next time you check mail, Eudora will automatically recognize this code and display a dialog box inviting you to confirm your registration information
- To do! You'll then become a registered user of Eudora... Thanks!

Thanks for choosing to purchase Eudora!

You'll next be walked through a few quick steps, as described below, before your purchase is complete.

- Eudora will open your web browser and take you to our Payment & Registration page
- You'll be asked to provide your payment and registration information on the web site
- We'll then email a Eudora registration code back to you
- The next time you check mail, Eudora will automatically recognize this code and display a dialog box inviting you to confirm your registration information
- Ta-da! You'll then become a Paid mode user. Congratulations!

Fig. 15H

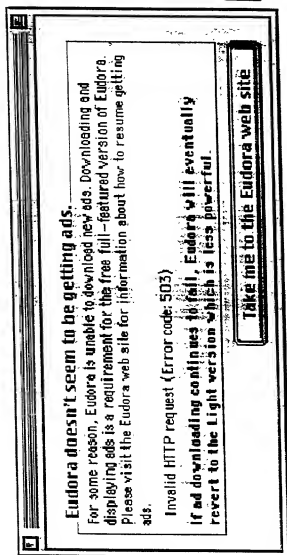

Fig. 17A

Something seems to be covering the ad.

It's probably inadvertent, but Eudora has determined that you are covering up all or a significant portion of an ad. The software is designed to notify you when this happens in the hopes that you will stop covering up the ad. If you don't, this window will keep popping up (which you will probably find quite annoying).

We've always got some good stuff under development back at the home office, and it's the advertising in Eudora that enables us to continue to develop the software while providing it to you for free. We've worked hard to make sure the advertising isn't annoying and we genuinely hope that you are not deliberately trying to cover the ads because they're bothering you. Of course, you can choose to pay us for Eudora by choosing "Payment & Registration" from the "Help" menu and clicking on "Paid Full Version." Or you can remove whatever is obscuring the ad.

OK

Fig. 17B

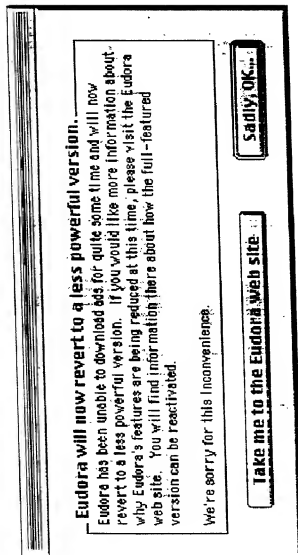

Fig. 17C

We'd like to know how you use Eudora.

In order to make Eudora work as well as possible, it's important that we know how people use it. We ask users for this information at random. Looks like it's your turn. If you're open to helping us this way, all you have to do is click "Generate Info" below and a message will be created. You can review the contents of the message if you like, and then send it to us or not -- that's up to you.

We value our privacy: we're pretty sure you value yours. So we want you to know what we'll be collecting and give you a chance to eliminate anything you don't want to send. Simply uncheck the boxes next to any information you'd rather not send.

Please understand that as soon as we receive your email, we will throw away the headers that identify the mail as coming from you. You see, we don't actually need to know who you are to find your information helpful. So we promise to protect your privacy and turn you into "just a number."

It's OK to transmit statistics regarding:

☒ Your demographic data
☒ Your Net/Eudora usage
☒ Advertisement information
☒ Eudora features you use
☒ Non-personal settings

8 The list of available ads advantageously can be built from the following query:

```

ads = dbConn.prepareStatement("SELECT * FROM ads WHERE StartDate <= today AND endDate >= today + 30 AND
AdType = 'P' AND AdStatus = 'A' AND ImpressionsServed < Impressions ORDER BY ImpressionsServed ASC");
run out ads = dbConn.prepareStatement("SELECT * FROM ads WHERE StartDate <= today AND endDate >= today +
30 AND AdType = 'R' AND AdStatus = 'A' AND ImpressionsServed < Impressions ORDER BY ImpressionsServed
ASC");
9 The time required to deliver the ads advantageously can be calculated in the following manner.

face time left for today [seconds] = faceTime[today] - faceTimeUsedToday

(Comment: Face time left for today is the number of seconds the servlet can use to deliver special ads today.)

predict face time [seconds] = SUM(faceTime[tomorrow], faceTime[tomorrow + 1], ... faceTime[tomorrow + reqInterval])

(Comment: Predict face time is the number of seconds the servlet predicts the user is going to have.)

goal show time left [seconds] = predict face time - faceTime.left

(Comment: Goal show time left is the number of seconds that the software provider needs to fill with ads.)

```
